STAR WARS: SPECIAL FORCES

For Progression-based, Skirmish Scale Campaigns in the Star Wars Universe

Introduction

Do you find it boring treating a whole squad of individuals as one? Would you rather not have to juggle 200 different cards every game like you're Gambit from X-Men? Do you want to get some use out of those expensive Star Wars Legion models you spent your hard earned money on? Well it's good news! Star Wars: Special Forces transports the Battle Companies experience all the way from middle earth to a galaxy far, far away.

The galaxy is in chaos, the Sith's attempt to open the gateway to the world between worlds with brute force has been catastrophic, causing wounds in the fabric of time itself. Armies and populations spanning thousands of years of history are suddenly thrust together in a single time, with some people just wanting to get some safe territory for their people to live out their lives, and others seeing the chaos as an opportunity for profit, power, or expansion.

In the hope of turning the tide of war in their favour, the heads of your faction have just approved your request to create a new special forces unit, providing you with a suitable ship to serve as your mobile base of operations, and enough resources for you to bring some units into your squad. The rest of this document will lay out all the details and information you need to create, manage and complete missions with your squad.

Forming Your Squad

Step 1: Select Your Faction

From the factions found in the relevant section, select which type of squad you would like to lead into battle. You will use the details of that faction for the rest of the campaign to determine the units you start with, the promotions they can get, your potential reinforcements and everything else that is specific to your particular faction.

Step 2: Purchase Units

You will start with 50 credits to build your initial squad with. When purchasing units in this step, you may choose to not completely fill each unit's equipment slots, in order to squeeze an extra unit in, in cases where you might be just a couple of credits short of being able to afford an extra unit. Each equipment slot left empty will save you 1 credit. This only applies when building your starting company, not when purchasing reinforcements. Any credits you have left over after buying your starting company go straight into your pocket, for you to use after your squad returns from its first mission. Make sure you name each unit you purchase, and maybe note down something specific about the model you'll use to represent that unit to make it easy to keep track of them.

Step 3: Choose Your Heroes

From your units that you have just purchased, you must now select 1 to be your squad's leader, and 1 to be an officer. These units will instantly receive the following bonuses, based on the role you chose for them. These units are considered "Hero" units, and have a separate promotion table to regular units. They can also purchase a wider range of equipment, detailed in the credits step of the back to the ship section. Your squad can have a maximum of 5 heroes at any given time.

Leader Bonuses

- The **Leader** trait
- Choose to roll for 1 trait from the general, shooting or close combat table
- +1 Wound
- +1 Equipment Slot

Officer Bonuses

- Roll for 1 general trait
- +1 Wound

Squad Restrictions

Your squad may not contain more than 2 force wielders at any given time, unless explicitly stated otherwise on your faction's information page.

Mission Prep

Step 1: Calculate Points Rating

Before each mission, all participants should calculate how many points their company is worth. Only include units that are going to be used in the battle, do not count any units that have been injured in the previous game and rolled a miss next game result.

In order to calculate how many points each unit is worth, start with the base value of the unit type*, and each time they gain anything from a promotion, add points to their profile using the guide below. If a non-hero unit gets a promotion, and they've already had any equipment slot upgrades, you will need to factor those into the new points value, not just copy down the points value of the new unit, as units keep equipment slot upgrades when they get promoted.

Point Value Increases

+1 Wound: 6 pts
+2 to CC/Shoot dice: 3 pts
+1 Equipment Slot: 1 pt
Traits: Depends on the trait, see the trait tables

**All units for each faction have already had their points calculated in this way, using a base of 8 points for a unit with 1 wound, 8/8 dice, no traits and 2 equipment slots.*

Step 2: The Will of the Force

If you are severely outgunned by your opponent, you may find that the will of the force lends you a helping hand to try and bring balance to the galaxy.

Work out the difference in points between you and your opponent, and if there is a sufficient difference, you may select from the following bonuses below, with a total points value less or equal to the difference in ratings.

Points	Bonus Details
5	Re-roll 1 Injury result once you're back to your ship (Lost if no injuries sustained)
5	Re-roll 1 promotion result once you're back to your ship (Lost if no promotions gained)
5	1 free wildcard (Can decide to use any card in your hand like an ace, once in the game)
5	1 Re-roll (of your own dice) to use at any point during the mission
10	Add 1 base unit from the Mercenaries faction to your squad for this mission, you can choose to hire them permanently and add them to your squad at the end of the mission for 5 credits if you wish
10	+2 Credits for losing +4 Credits for drawing/winning
15	All units +1 Exp for losing All units +2 Exp for drawing/winning

Step 3: Choosing a Scenario

There are multiple ways in which you can decide on a scenario.

Firstly, if any of either player's units received a “Lost in Battle” result on the injury table after the last game, you must play the rescue scenario, and attempt to rescue the unit in question.

Secondly, players can agree on a scenario. Whether they just want to try something new, use a particular piece of scenery or whatever, or do a battle with more than 2 participants, as long as all participants agree.

If neither of the above conditions apply, you can roll to select a scenario, based on the table below

Random Scenario

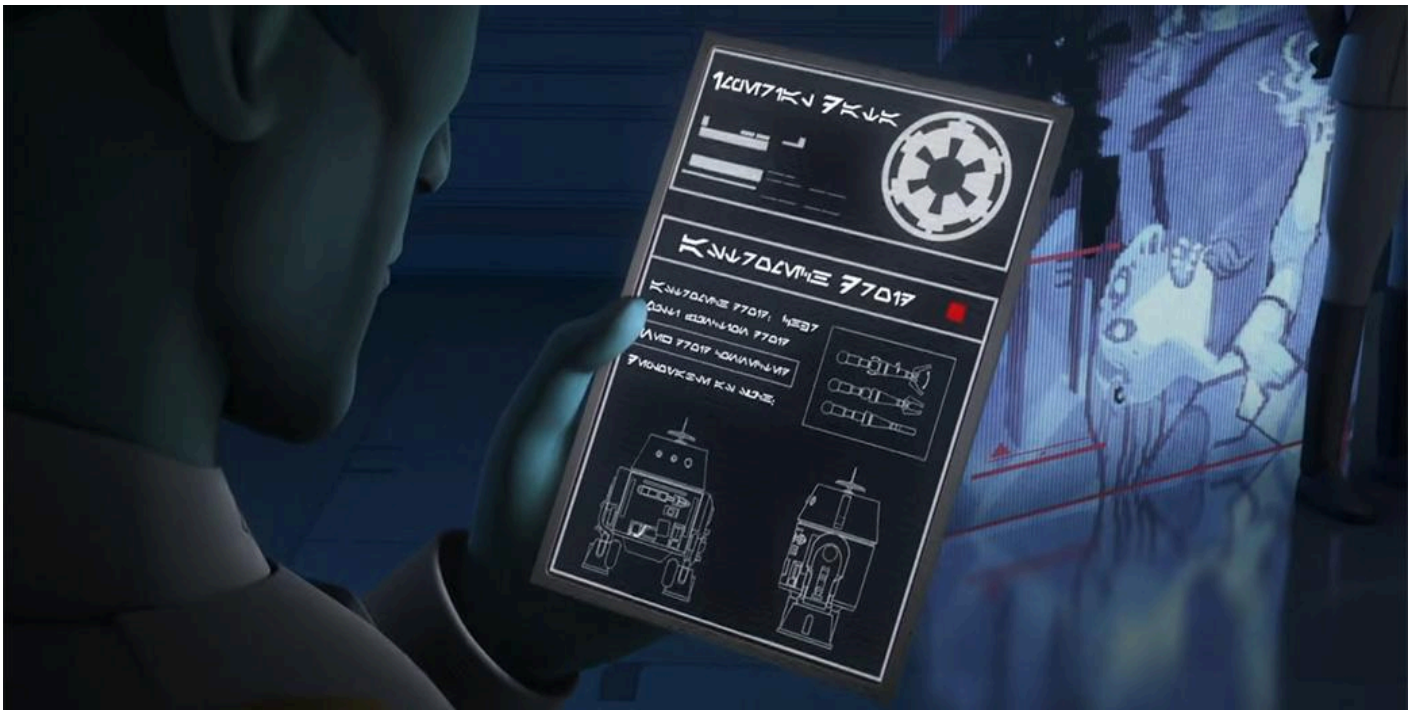

Squad Elimination
Disable the Shield Generator
Advanced Scouting Parties
Bounty Hunt
Rescue
Domination
Cantina Brawl
Supply Shower
Heroic Last Stand
Aggressive Negotiations

Step 4: Prepare to Keep Notes

Now you are all set to play a mission. If you have lost hope of completing your mission, and don’t wish to sustain any more casualties you can choose to forfeit the game. Forfeiting the game will cause your opponent to receive credits as though they have perfectly met every victory condition, and you will receive nothing but the base amount for just participating in a battle.

During the battle, you should keep a track of any potential experience gained by your units. Most of this you can work out at the end of the battle, but for any experience that could be gained by wounding enemy units, you should keep track of that as you play, so you don’t forget about any by the time the battle finishes.

Likewise, keep all your units that got injured together off the board, so you know which ones to roll for at the end of the game, using the table in the injuries section below.

Back to the Ship

Step 1: Injuries

The Mission has ended, and your squad returns to their ship. But did everyone make it? To find out you must roll on the appropriate injury table for each unit that was taken off the battlefield, either because they fled the mission, or they were reduced to 0 wounds.

Hero Injury Chart (2D10)

0-5 – Dead This unit lies dead on the battlefield, and has become one with the force.

6-10 – Permanent Trauma This unit has stumbled back to the ship, and still looks visibly shaken. Roll on the Negative Trait table to find out if their trauma is physical or emotional.

11-15 – M.I.A. This unit didn't make it back to the shop in time, and was presumed dead, and lies on the battlefield bleeding to death. Your next mission *must* be a rescue mission to try and save them.

16-30 – Injured This unit needs some time in a bacta tank, and as such will miss your squad's next mission.

31-40 – Mystery Ailment Something is wrong with this unit, but no one knows what. You can either stick them in the trusty bacta tank, or try an experimental treatment, re-rolling on this table.

41-79 – Speedy Recovery This unit only suffered minor injuries, and will be raring to go for their next mission.

80-89 – Miraculous Recovery This unit makes a full recovery and you may remove 1 negative trait of your choice from them if they have any.

90-94 – Recovered Goods While downed on the battlefield, this unit found and recovered some materials that could be worth selling on the black market. Gain 2 Credits.

95-99 – Learning From Their Mistakes This unit makes a speedy recovery and gains +2 experience.

Warrior Injury Chart (D10)

1 – Dead This unit lies dead on the battlefield, and has become one with the force.

2 – Permanent Trauma This unit has stumbled back to the ship, and still looks visibly shaken. Roll on the Negative Trait table to find out if their trauma is physical or emotional.

3-4 – Injured This unit needs some time in a bacta tank, and as such will miss your squad's next mission.

5-8 – Speedy Recovery This unit only suffered minor injuries, and will be raring to go for their next mission.

9 – Miraculous Recovery This unit makes a full recovery and you may remove 1 negative trait of your choice from them if they have any.

10 – Learning From Their Mistakes This unit makes a speedy recovery and gains +2 experience.

Step 2: Experience

Now that you have resolved all of your injuries, it is time to check how much experience each of your units has gained, and if any of them have gained enough to earn a promotion. Use your unit sheets to keep track of experience for each unit by making tally marks for each point of experience gained, with up to 5 tallies per box.

Units gain 1 experience for each of the following:

- Participating in a mission
- Wounding at least 1 enemy unit (keep a track of this during the mission)
- Defeating an enemy hero unit (keep a track of this during the mission)
- Completing certain objectives during the mission (see the scenario info for specific details)

Finally, each player must choose who they think their opponents MVP was, **excluding hero units**. The unit voted MVP gains +1 experience. There must be some kind of justifiable reason for your pick, could be due to them being generally annoying, defeating a key unit of yours, holding an objective that won them the battle etc.

Step 3: Promotions

When a unit has gained 5 experience points, and filled up one of the boxes on the unit sheet, they are ready for a promotion!

If a unit has excess experience points, they may choose to use them to alter the result(s) of their rolls. Either on the promotion table or on a trait table if applicable. You can use each excess experience point to alter a result up or down on the table by 1 result per experience point. Each point used like this is expended, and must be removed from the unit's EXP tally. Regular units can only use a max of 1 excess exp point per promotion roll, and cannot use it to get the promotion to hero result.

Regular Promotion Table (2D10)

0-19 – Nothing Better luck next time.
20-34 – Extra Equipment Slot The Unit has learned to more efficiently equip itself for combat, giving it +1 Equipment Slot.
35-84 – Promoted The unit gains promotion to the next rank, if eligible. Promotions are detailed in each faction's information section.
85-99 – Promotion to Hero This unit is now classed as an officer and gets the bonuses an officer receives when creating your company. Your company cannot exceed 5 heroes, so re-roll if you're already at the limit.

Hero Promotion Table (2D10)

0-9 – Extra Equipment Slot The Unit has learned to more efficiently equip itself for combat, giving it +1 Equipment Slot.
10-24 – Extra Wound Cannot exceed 3.
25-44 – Close Combat/Shooting Die +2 Choose, cannot exceed d12 (re-roll if both maxed).
45-59 – Roll for a General Trait Re-roll if you get one you already have.
60-79 – New CC/Shooting Trait Choose which one you'd like to roll for. Re-roll if you get one you already have.
80-89 – Choose From any of the Above Results
90-94 – Roll for a Hero Only Trait or Become Weapons Specialist
95-99 – Roll on the Other Gear Table/Become force sensitive Choose, cannot transfer special gear between crew members. If choosing the latter, replace any ranged/melee weapons with a lightsaber.

Step 4: Credits

By completing missions, your squad will earn credits, which you can then use to improve the size and strength of your squad.

For participating in a mission, you receive the following amount of credits, based on the outcome of the mission:

- D8 +3 Credits for losing
- D8 +4 Credits for drawing
- D8 +6 Credits for winning

You can spend credits on equipment for your squad members. Equipment costs 1 credit per equipment slot it takes up for regular units, and 2 credits per equipment slot it takes up for heroes.

Regular units can purchase any gear available in their profile, and hero units can buy any gear available to any potential promotions they could've gotten (and any of their previous profiles if they have already been promoted before becoming a hero).

For example a Clone Trooper from the Grand Army of the Republic faction, once promoted to a hero, could buy and use any of the gear available to any of the clone units in that promotion tree, but a Clone Marksman could only purchase and use gear from the Clone Trooper, Clone Marksman and Clone Sharpshooter profiles.

In addition heroes can pretty much any existing gear as long as you have a model that can represent it, besides weapons that are marked as specialist weapons (unless they have the weapon specialist trait)

The cost of calling for reinforcements depends on which faction you are playing. Factions with weaker base units will have a slightly cheaper reinforcement cost, and vise-versa. Check your faction's information section for the exact cost of calling for reinforcements for your squad.

As mentioned earlier, if you took any mercenaries with you, you can choose to hire them to join your squad permanently, for a cost of 5 credits each.

Trait Tables

REMINDER:

"If a unit has excess experience points, they may choose to use them to alter the result(s) of their results. Either on the promotion table or on a trait table if applicable. You can use each excess experience point to alter a result up or down on the table by 1 result per experience point. Each point used like this is expended, and must be removed from the unit's EXP tally."

Always make sure you check the Gameplay Rules Amendments document for traits to see if they have been functionally altered at all, before checking their description in the main rulebook. Also make sure you add the corresponding points value to your unit once you obtain a trait.

If you roll a trait that you already have on any of these tables, and you do not wish to use any excess experience to alter the result, you can always re-roll until you roll a new trait.

Negative Traits (2D10)

0-6 – **Unlucky** (-3) Each enemy unit gets 1 free re-roll against this unit per game
7-13 – **Brittle** (-2) +1 to all wound rolls made against this unit
14-20 – **Deserter** (-2) All checks to run away are hard task rolls (8+) regardless of the difference in shock and wounds
21-27 – **Sluggish** (-2) This unit can only be activated once all your other units have been activated
28-33 – **Coward** (-1) Must make a medium(5+) task roll before charging an enemy
34-39 – **Drunkard** (-1) Start the game with 1 shock token
40-45 – **Lousy Shot** (-1) -1 to hit when shooting
46-51 – **Slow** (-1) -1" movement
52-57 – **Unskilled** (-1) -1 to CC rolls
58-63 – **Clumsy** (-1) For each move action you take, roll a D10, on a 1, you fall over and your activation ends

64-69 – **Sore Thumb** (-1) Reduce cover tier by 1
70-75 – **Incompetent** (-1) Use a D8 for task rolls
76-81 – **Fumbler** (-1) Must make a easy(3+) task roll to be able to pick up their weapon
82-87 – **Simpleton** (-1) Can't interact with objectives such as marking crates, or disarming shield generator
88-93 – **Brain Damage** (-1) At the start of this unit's activation, roll a D10. On a 1, this unit makes a double move in a random direction, chosen by rolling a D10
94-99 – **PTSD** (-1) At the start of this unit's activation, roll a D10. On a 1, this unit makes an attack (CC or ranged) on the nearest unit (ally/enemy) and then ends their activation

General Traits (2D10)

0-2 – **Loyal** (0) Can never run off the board when fleeing (stop at edge)

3-5 – **Ranger** (0) +1 to CC and no penalty for moving in rough terrain

6-8 – **Indomitable** (1) Use 2 actions to remove 1 shock

9-11 – **Smart** (1) +1 to task rolls

12-14 – **Deadly Strike** (1) -1 to opponents armour roll

15-17 – **Coolheaded** (1) +1 to shock recovery rolls

18-20 – **Nerves of Steel** (1) Ignore your first shaken result of the game

21-23 – **Quick** (1) +1" to your movement stat (per action)

24-26 – **Immovable Object** (1) Unit doesn't get knocked down by wound results

27-29 – **Bounty Hunter** (1) Choose 1 enemy at the start of the game. Gain +1 to your rolls against that enemy, and -1 against all other units. If you successfully land the wound that puts that unit out of action you gain 2 credits

30-32 – **Armored** (2) Increase armour level by 1

33-35 – **Camouflage** (2) -1 to be hit be shooting when in cover

36-38 – **Vengeful** (2) +1 to CC, shoot & wound rolls against units that have wounded you this game

39-41 – **Acrobatic** (2) Can move through enemies by jumping over them. If you finish your move within 1" of them you still initiate a combat

42-44 – **Composed** (2) Use a D12 for task rolls instead of a D10

45-47 **– Fearless** (2) Ignore the penalty for multiple shock markers on all recovery rolls (capped at -1 modifier for shock tokens)

48-50 **– Invulnerable** (2) Once per game re-roll a failed recovery roll

51-53 – **Cunning** (2) Re-roll 1 task roll per turn

54-56 – **Dodge** (2) If a shot at you misses, you may move 5" towards cover

57-59 – **Infiltrator** (2) Free 10" move at the start of the game

60-62 – **Lightning Fast** (2) If an enemy rolls a hit when shooting you, make a Hard(8+) task roll to dodge it

63-65 – **Slippery** (2) Ignore zones of control, can leave combat freely on your turn

66-68 – **Sprinter** (2) Get a free 3" move action every time this unit activates

69-71 – **Survivor** (2) +1 to injury rolls (+10 for heroes)

72-74 – **Blood Frenzy** (2) Ignore negative modifiers from wounds

75-77 – **Last Stand** (3) When reduced to 0 wounds, play out the rest of the turn and then remove from the battlefield

78-80 – **Medic** (3) When touching the base of a friendly unit, you may spend 1 action to make a Medium(5+) task roll to try and heal one of their wounds. On a natural roll of 1, inflict a wound instead

81-83 – **Stealthy** (3) -1 to be hit by shooting at all times

84-86 – **Strategist** (4) Draw 1 extra card at the start of each turn

87-99 – **Choose any of the above**

Close Combat Traits (2D10)

0-3 – **Concealed Weapon** (1) Once per game, roll 2 dice in CC and pick one result (can be used in combination with a 2 card to roll 3 dice!)

4-7 – **Pugilist** (1) No penalty for fighting unarmed

8-11 – **Solid as a Rock** (1) Can't be pushed pack or moved in CC

12-15 – **Fancy Footwork** (1) Win draws in CC

16-19 – **Fearsome Appearance** (2) Enemies must make a medium(5+) task roll to charge you

20-23 – **Street Fighter** (2) Ignore penalties for being outnumbered in CC

24-27 – **Two Fisted** (2) Can choose to roll 1 die for each enemy in CC (see main rules for further clarity)

28-31 – **Flurry of Blows** (2) If you win a CC and only cause a shock result, you can choose to immediately fight again.

32-35 – **Stampede** (2) Make a medium(5+) task roll to move through an enemy's control zone. On a nat 1 you bounce off them and are knocked down

36-39 – **Riposte** (2) If an opponent fails to wound you after beating you in CC, make a hard(8+) task roll in order to roll to wound them back

40-43 – **Steadfast Defence** (2) Negate enemy charging bonuses in CC

44-47 – **Disarm** (2) If you roll 1 away from causing a wound in CC, you disarm the enemy (if they're holding a CC weapon)

48-51 – **Unstoppable** (3) Once per turn, if you put your opponent "Out of Action" in CC, you may immediately fight an enemy within 5"

52-55 – **Defensive Fighter** (3) When defending in CC if you win the combat, you may immediately make an attack of your own against the attacker

56-59 – **Determined** (3) Ignore shock tokens in CC

60-63 – **Bloodthirsty** (3) You must charge if there are any enemies within range. You gain a +1 on your CC roll and Wound roll when charging

64-67 – **Running Attack** (3) If you win a CC, and push the enemy(s) back, you may use any remaining movement you had to engage and fight a NEW enemy

68-71 – **Thundering Charge** (3) +1 to CC roll when charging

72-75 – **Weapon Master** (3) +1 to CC roll (must be holding a CC weapon)

76-79 – **Freight Train** (3) When winning a CC by 5 or more, knock your opponent down in addition to whatever wound result you roll

80-83 – **Ferocious** (4) +1 to Wound in CC

84-86 – **Sharp Tongued** (4) Make a medium(5+) Task roll to force your opponent to re-roll 1 CC die

87-89 – **Brawler** (4) Re-roll you CC die once per turn

90-98 – **Choose any of the above**

99 **– Master of Melee** (5) Roll 2 dice in CC and pick the best result. Stacks with the 2 card

Shooting Traits (2D10)

0-5 – **Loads of Ammo** (1) Ignore first Out of Ammo result of the game
6-11 – **Two Gunned** (1) Can use burst, but don't go out of ammo unless rolling at least two 1s
12-17 – **Deep Breath** (2) Aiming grants a +3 bonus
18-23 – **Deft** (2) Reloading costs 1 less action
24-29 – **Eagle Eyed** (2) Increase range by 2"/4"
30-35 – **Steady** (2) Ignore shock tokens on shots
36-41 – **Target Lock** (2) Can shoot units in combat without having to make any extra rolls
42-47 – **Lucky Shot** (2) When missing a shot, choose another enemy within 3" and roll a D8, on an 8 it hits that enemy and you roll to wound as normal
48-53 – **High Ground** (2) Reduce enemy cover level when shooting from higher ground than the target (must be at least 1" of elevation)
54-59– **Deadeye** (3) +1 to shoot rolls
60-64 – **Quickdraw** (3) When charged by an enemy, take a close range shot with a -2 penalty with a ranged weapon that only requires 1 equipment slot
65-69 – **Hipfire** (3) You can make a double move (not into CC) and take a shot with a -1 modifier. Measure range and line of sight from the halfway point of your move (1 eq slot weapons only)
70-74 – **Double Tap** (3) If you hit but don't wound with a shot, make another shot at the same target with a -1 penalty (non specialist weapons that do not require a reload, if you have Deft you can use this with a *reload 1* weapon)
75-79 – **Run & Gun** (3) When charging an enemy with a double move, take a close range shot with a -2 penalty with a ranged weapon that only requires 1 equipment slot (pistols, slings etc.)
80-84 – **Killer** (4) +1 to wound rolls with ranged weapons
85-89 – **Sniper** (4) Re-roll 1 shoot roll per turn
90-98 – **Choose any of the above**
99 – **Ranged Fighter** (5) D12 for shooting and wounding at range, but D8 for CC rolls and rolls to wound in CC (overrides any dice upgrades you may get)

Hero Only Traits (D12)

1 – **Bodyguard** (3) You may apply a Wound result to any friendly model within 2" instead of taking the Wound yourself
2 – **Sixth Sense** (4) Force an enemy to re-roll once shoot action against you per turn
3 – **Encouraging** (4) As an action, remove all shock from a friendly within 12"
4 – **Gadgeteer** (4) Roll on the other gear table at the start of each game (does not take up any equipment slots)
5 – **Leach** (5) If you cause a wound in CC, heal 1 wound
6 – **Poison/Corrosive Rounds** (5) If you cause a wound on a unit, roll for a wound on that unit at the end of each round. If you roll a 1 in CC, or go out of ammo, you are out of Poison/corrosive rounds for the rest of the game. Must pick between CC or shooting, NOT BOTH
7 – **Lucky** (6) You may re-roll any die once per turn
8 – **Tough as Nails** (6) +1 wound and increase maximum wounds to 4
9 – **Cold Blooded** (6) You gain +1 in CC or to hit with shooting for each shock and wound marker your opponent has
10 – **Damaging Aura** (6) As an action place the 3" blast template on your model, roll to wound ANY other units under the template
11 – **Terrifying Presence** (6) Enemy units within 4" get -1 to all their rolls except wound rolls
12 – **Choose any of the above**

Scenarios

If the difference between the sides is 5 points or less, then have a roll off to decide who gets to choose which side they want to be instead.

1 - Squad Elimination

You have been ordered to wipe out the enemy without mercy, or remorse.

Before the battle begins, the player with the lowest points total picks which side of the battlefield they want to start on. Then players must divide their squads up into equal groups, each led by one hero. For each group, roll a die. On an even result, that group starts in contact with the edge of the battlefield, on an odd result, that group starts anywhere within 8" of that same edge.
The mission ends at the end of the turn, in which at least one side has been reduced to 1/3 or less of their starting units. If this happens to both sides in the same turn, the mission ends in a draw. Otherwise, the side which still has more than 1/3 of its units still in action, wins.

Bonus objective exp.
Landing the killing blow on regular units

2 - Disable the Shield Generator

The enemy are holding a key military base, protected by a powerful energy shield. Your allied forces have no chance of breaking through the shield with the firepower they have. Your squad has been assigned the task of infiltrating the base and disabling the energy shield.
(This requires having a piece of terrain available to use to represent the shield generator.)

Before the battle begins, the player with the lowest points total picks whether they want to be the attacking or defending side. Place the shield generator in the centre of the battlefield, at ground level (not on a hill or anything). The defending player may then place all their units anywhere they like, within 8" of the generator. The attacking player must divide their squad up into equal groups, each led by one hero. They then place each group anywhere they want, on any edge of the battlefield.
The attacking squad has the element of surprise for this mission, and as such the defending squad is unable to make any kind of attacks until an enemy unit has been spotted. Attacking units can be spotted in one of 2 ways. Firstly, if an attacking unit makes any kind of attack (shoot, grenade throw, charging for melee etc.) they are now spotted, and remain so for the rest of the mission. Secondly, at the start of each defending unit's activation, they should make a task roll for each attacking unit within 12" of them. If they are in the open, it is an easy task, in light cover medium and in heavy cover, it is a hard task. Passing the task roll will reveal the corresponding attacker for the rest of the mission.
To disable the shield generator, you must either destroy it, or switch it off by getting a unit into contact with it, and then performing a hard task roll. With regards to destroying it, the generator is treated as if it has 3 wounds, and light armour. It cannot be attacked in close combat, if you are in contact with it you must attempt to switch it off rather than destroy it.
The attacking squad wins if they manage to disable the shield generator, before they are reduced to 1/3 or less of their starting units. Otherwise, the defending team wins the mission.

Bonus objective exp.
Attackers: Wounding or disabling the shield generator. If disabling, 1 exp per remaining wound on the generator
Defenders: Landing the killing blow on regular units

3 - Advanced Scouting Parties

Your squad has been asked to scout ahead of the rest of their army in order to gather essential information about the enemy. Unfortunately, on your route, you encounter an enemy squad attempting the same thing!

Before the battle begins, the player with the lowest points total picks which side of the battlefield they want to start on. Then both players deploy their squads in a wedge formation, with their leader at the front, 12" away from the edge of the battlefield.
The mission ends at the end of the turn, in which at least one side has been reduced to 1/3 or less of their starting units. The player which has got the most units to the opposite edge of the battlefield from where they started, wins the mission. If the number is equal, it is a draw.

Bonus objective exp.
Getting off the opponents edge of the board

4 - Bounty Hunt

A dangerous being has been wreaking havoc on a local population. They have pooled together to put out a bounty on them. Unfortunately, you and your opponent have both had the same idea!
(You'll need a 3rd person available to control the target)

The player with the lowest points total chooses a corner of the board. The other player takes the opposite corner as their corner. Place the target in the middle of the battlefield. Each player places all their units within 12" of their corner at the start of the mission.
The Target should have an odd number of wounds, and is immune to shock and being downed. The target should be agreed upon by the players, and how powerful they are should be relative to the strength of the 2 squads taking part in the mission.
The mission ends when the target is reduced to 0 remaining wounds. The squad that inflicted the most wounds on the target is the winner.

Bonus objective exp.
Inflicting a wound on the bounty

5 - Rescue

An important figure from your faction has been captured by the enemy, and is being held unconscious! Can you clear out a landing zone for a pickup?

If this scenario is being played due to a unit getting an M.I.A. result on the injury table, then the attacking/defending team is already decided, and the player with the lowest points total picks which side they want to be their side. Otherwise the player with the lowest points total gets to decide whether they want to attack or defend, and their opponent chooses what side of the board they want as their side.
The captured unit is placed in the centre of the battlefield, and the defending player places one hero and up to half of their regular units within 3" of the captured unit. The attacking player places one hero and up to half of their regular units within 8" of their side of the battlefield. At the end of each turn, roll a D10 for each of your units that has not yet entered the battlefield.

- 1-3 – This unit does not enter the battlefield
- 4-7 – This unit is placed anywhere on your edge of the battlefield
- 8-10 – This unit is placed anywhere on any edge of the battlefield that is not your opponent's edge.

The attacking team wins by having at least 1 unit within 3" of the target, while the defenders have 0 at the end of a turn. The defending team wins by reducing the attackers to less than 1/3 of their starting units at the end of a turn (including the units that started off the battlefield)

Bonus objective exp.
Attackers: Landing the killing blow on an enemy within 3" of the target, being within 3" of the target to win the game
Defenders: Landing the killing blow on regular units

6 - Domination

Set up 3 objectives along the halfway line of the board, and 1 in each player's half of the board. The player with the lowest points selected which side they want to start on. The player with the most points deploys their force first, however they like, within 10” of their edge of the board. Then the player with the lowest points deploys in the same way.

Objectives are captured by having at least one unit within 3” of an objective, while your opponent has none. At the end of each turn, each player scores 1 point for each objective they control. Objectives controlled by enemies can still be captured, providing the same conditions as originally are met.
The mission ends at the end of the turn in which one squad has been reduced to 1/3 or less of its starting force. The player with the most points at the end of the game wins.

Bonus objective exp.
Wounding an enemy that is on an objective

7 - Cantina Brawl

Set up on the urban battlefield, with 5 or 6 death stick addicts scattered around the centre of the battle field. The player with the lowest points selected which side they want to start on. The player with the most points deploys their force first, however they like, within 10” of their edge of the board. Then the player with the lowest points deploys in the same way.
At the end of each turn, the death stick addicts move 5” in a random direction, and then if not in combat, throw a grenade in a random direction.
The mission ends at the end of the turn, in which at least one side has been reduced to 1/3 or less of their starting units. If this happens to both sides in the same turn, the mission ends in a draw. Otherwise, the side which still has more than 1/3 of its units still in action, wins.

Bonus objective exp.
Landing the killing blow on regular units

8 - Supply Shower

The player with the lowest points total picks which side of the battlefield they want to start on. Then both players deploy their squads however they like, within 8” of their side of the battlefield.

At the start of each turn, 1 supply carte lands D10” away from the center of the board in the direction the die is pointing. During the mission, each player can use their units to mark supply crates for the ship to pick up. They can do so by moving into contact with a crate and spending 1 action to mark it. You cannot mark crates if an enemy is currently in contact with it. If no enemy is in contact with a crate you can spend 1 action to remove their marker and mark it for yourself.
The mission ends at the end of the turn in which one squad has been reduced to 1/3 or less of its starting force. The player that marked the most supply crates is the winner.

Bonus Objective exp.
Marking a crate that is then picked up for your side

9 - Heroic Last Stand

The player with the lowest points total chooses whether they want to attack or defend. The defending player deploys only their heroes that are available for this game, in or on some kind of defensible terrain in the center of the board (high ground, building or similar).
Before each turn, the attacking player rolls (D10) for each of their units that are not yet on the board to see if they will be deployed.

- 1-3 – This unit does not enter the battlefield
- 4-7 – This unit is placed anywhere within 4" your edge of the battlefield
- 8-10 – This unit is placed anywhere on the edge of either side of the board

The attacking player has 4 turns to eliminate over half of the heroes the defending side started with, if they fail to do so, the defending side wins. If exactly half are eliminated after 4 turns, it is a draw.

Bonus objective exp.
Attackers: Finishing blow on enemy hero (so 2 for that instead of the usual 1)
Defenders: Surviving to the end of the game

10 - Aggressive Negotiations

Your leaders were both sent to negotiate a peace deal, but they were sabotaged! A blast went off in the tent they were in, sending them flying and leaving them both unconscious. Unclear as to who was responsible, their respective companies open fire while desperately scrabbling to get their leader to safety.

Due to the blast, there is a clearing in the centre of the board with no terrain, 8" in diameter. The player with the lowest points chooses an edge of the battlefield. From the centre of the board, measure back 4" towards your edge and lay your leader down on the ground. Players alternate in rolling for each of their other units. On an odd number, deploy them anywhere within 8" of your edge, on an even number, up to 16" away from your edge.
The aim of the game is to have one of your units pick up your leader, and carry them back off of your edge of the board to receive medical care. Picking them up costs an action, and you can't shoot or charge into CC while carrying. If an enemy charges you, your leader is dropped on the floor. You cannot pick them up while touching or in CC with an enemy. Your movement distance is unaffected by carrying, but you can't climb up or down. If you are wounded, or fail a run away check while carrying, you drop them.
The game ends either after both leaders are off the board, or when 5 turns have been completed. If only one player succeeded, then they win and their opponent loses. Otherwise it is a draw. If you fail to get your leader to safety, you must roll on the injury table for them at the end of the game.

Bonus objective exp.
Carrying you leader at least 10" (once per unit)
Inflicting a wound on an enemy who is carrying their leader.
